## Synthetic Turf International

It is with pleasure that I now officially endorse STI putting green products. Although I have been a long time client and have enjoyed an STI putting green at my Corporate headquarters in Orlando and at my home I can not tell you how impressed I am with your current surface. The 2005 nylon cross-stitched putting surface is the finest artificial putting green I have ever encountered. If anyone had told me a synthetic green would putt this well – I never would have believed it.

We are extremely pleased with the installed putting green at the entrance of our World Headquarters - Champions Gate in Orlando. The total short game facility with perimeter fringe and synthetic grasses is very impressive. Further, the E Z Tee line material which takes a natural tee is realistic, unlike the hard tee mats of old. The 2" nylon surface allows a player to tee up at any height unlike mats that utilize a rubber tee with a pre-set height. The putting room you installed is being utilized by touring professionals to analyze putting techniques. The consistency of the surface is of utmost importance in analyzing their putting stroke, which is why we choose STI's nylon surface.

I am looking forward to working with STI in the future and have enjoyed the professional relationship that we have had for many years. Your people have displayed professionalism in all of our dealings. Your putting green installers are true craftsmen.

Sincerely,

David Leadbetter
